Preface

By publishing this special issue of Theoretical Computer Science, we would like to honour the memory of Attila Kuba, who passed away on November 1, 2006.

This issue contains an Editorial article, written by the Guest Editors, and a collection of 15 selected papers. The papers have been selected after a thorough review procedure, at the usual high standard of TCS. The articles cover a range of topics, mostly related to the main fields of interest of Attila, notably on Discrete Tomography and Digital Geometry.

The Guest Editors would like to thank all the people who contributed to this Special Issue. We express our gratitude to all authors who submitted their papers for this issue, to the reviewers for their suggestions and quality assurance, and to the Editor in Chief of TCS, Giorgio Aussiello, for enabling and supporting us to create this Special Issue.
